## 1 Introduction

This specification is for the description of the labels for marking of goods for transportation by simultaneous use of EDI at home and abroad. To which countries you can send packets with EDI, we refer to the applicable specifications for EDI file formats.

The label is designed according to the CEN EN 1573 Multi-industry Transport Label / Norwegian EDIPRO "Norwegian standard for Transport label" with the information, necessary for the treatment and presentation of the goods.

## 2 Content

The specification contains descriptions regarding:

- Parcels
- Cargo
- partly Express

Bring Express has also a specific specification regarding their cooperation with UPS.

Bring Frigo Norway has also their own specification regarding thermo transportation.

## 3 Dimension

The width of the label Mandatory must be between 101mm (4 ") or 148mm.

Minimum height is 192 mm. Otherwise, one can choose the height which suits your needs..

## 4 Material

The label shall be of such a material that it can withstand the physical strain, and that the package's underlying structure does not affect the readability of bar codes.

## 5 Barcodes

### 5.1 Domestic:

The bar code shall, depending on the content, be of symbology GS1-128 according to GS1 / UCC standard, Code 128 according to EN 799, X-module a minimum of 0,375 mm, height at least 22 mm.

Readability should be tested and be satisfactory after CEN EN1635 standard, quality (overall) minimum ANSI B.

### 5.2 Abroad:

Regarding Parcels, until further notice, only Code 39 can be used as barcode symbology and UPU's S10 standard for content.

The bar code shall be of symbology code 39 according to EN 800 Quality ANSI B, X module 0375 mm and the ratio 2,33:1 or 2.0:1, height 22 mm. The customer is obliged to order a new number series at the Post Office, at least two weeks prior to the current number series is expected to be exhausted.

Readability should be tested and be satisfactory after CEN EN1635 standard, minimum ANSI B

For Cargo and Express, see Domestic.

### 5.3 Barcode identifiers

The CEN license plate requires the use of standard identifiers to describe the use of the bar code. When GS1-128 code is used, it shall be an application identifier (00) ahead of the barcode for the Licence plate-number. This code also contains identifiers for packaging type, country, and shall also contain the customer number in GS1. Including the code identifiers, the Licence plate-number consists of 20 numeric characters.

FACT standard, which uses Code128 also contains identifiers. For the Licence Plate it will be 3J when EDI is used. In addition, it Mandatory contain the code belonging to the approved CEN agent that assigns user code. This code can contain up to 35 alpha-numeric characters.

## 6 Elements of data
